

Antibiograms are important when designing antibiotic resistance studies to ensure the API targets the strains it's supposed to target. Below are the antibiograms of several isolates for several species of bacteria in Emery Pharma's inventory.

Typical MIC values are given for each standard antibiotic and then the susceptibility is determined per CLSI guidelines:
R = Resistant, **S** = Susceptible, **I** = Intermediate

STAPHYLOCOCCUS AUREUS		MIC (µg/mL)															
PHENOTYPE	STUDY ISOLATE ID	Ciprofloxacin		Clindamycin		Erythromycin		Mupirocin		Oxacillin		Tetracycline		Trimeth/Sulfa		Vancomycin	
VISA	1674604			>4	R	>4	R			>2	R			2	S	>4	R
VISA	1674605					>8	R			>8	R					4	I
mupirocin R	1674606	2	I			0.5	S	>128		≤0.25	S
